Introduction

This report details the database schema as created by Group 18 for the CS4056 Web Infrastructures project. The document consists of a single section, containing;

- **Database Table Synopsis** – a simple listing of the attributes and datatypes for every table in the database. In some cases this is followed by a short note explaining the logic behind the grouping of certain attributes in the same table.
- **Table SQL Creation Declarations** – the SQL statements used to create each table on the group's MySQL database, including information on Foreign Key constraints, use of auto-increment, and default attribute values.
- **Entity Relationship diagram –** An entity relationship diagram of the tables.
- **Link to Git Repository file** - https://github.com/CS4014group18/web filename is web7.sql The sql file was generated using MySQL Workbench constraint names were deleted to remove problems with duplicate names.

Database Tables

This section displays all database tables, attributes and datatypes, with the SQL create table statements included to show foreign keys, default values and auto-increments.

User

ID	FirstName	LastName	Email	Password	Reputation
VARCHAR(8)	VARCHAR(30)	VARCHAR(30)	VARCHAR(50)	VARCHAR(50)	INT

```
CREATE TABLE IF NOT EXISTS `group18`.`User` (
  `ID` VARCHAR(8) NOT NULL,
  `FirstName` VARCHAR(30) NOT NULL,
  `LastName` VARCHAR(30) NOT NULL,
  `Email` VARCHAR(50) NOT NULL,
  `Password` VARCHAR(50) NOT NULL,
  `Reputation` INT ZEROFILL NULL,
  PRIMARY KEY (`ID`),
  UNIQUE INDEX `Email_UNIQUE` (`Email` ASC));
```

NOTE email is declared as unique and Reputation is initialised to zero.

Major

ID	Major
VARCHAR(8)	VARCHAR(50)

```
CREATE TABLE IF NOT EXISTS `group18`.`Major` (
  `ID` VARCHAR(8) NOT NULL,
  `Major` VARCHAR(50) NOT NULL,
  PRIMARY KEY (`ID`),
